

A Dravidian decipherment of Indus script

S.K.Venkatesan
CQRL Bits, Chennai

5 Abstract

The Indus script writing system is described here as a logo-syllabic system with almost unique syllables associated with them. The crucial aspect of the decipherment is the observation that semantic value of numbers are not related to quantifiers but are used as adjectives such first/strong/mature etc., through the syllables that are derived out of it. The standalone semantic values of the logo have crucial role to play in deciding the syllabic value of the logo, but it only uses the modified syllabic value in the instances of the text. Although main syllabic value is maintained around it's primary consonant value, the syllables have pluripotency both in terms of semantics and syllables in context, i.e., they have modified vowels and soft consonants (glides). This decipherment is not only about syllabary, it also provides complete semantic decipherment as well, uncovering various aspects of the life of Indus Valley Civilization. Most of the seals are about the barter trade transactions and describe from/to addresses, with mode-of-transport indicated in-between. The urn-symbol is deciphered as "ūr" (town/village) with various adjectives preceding it (or infused into the sign) describing the town. The unicorn-seal indicates that it is trade-related activity. The fish-signs and arrow signs describe the mode of transport of goods. The goods are indicated by the object before the animal indicating whether it is a food-type or not (perishable goods or not). The decipherment also uncovers aspects other than trade, like marriage and disputes.

Prelims

We list a few acronyms/initialisms that is commonly used in the article:

- IVC : Indus Valley Civilization
- 25 DED: Dravidian Etymology Dictionary [1]
- M77: MASI 77, Mahadevan [2]
- WB: Wells, B., Indus Writing [3]
- MVB: M.V.Bhaskar [4]

DED refers to the entry numbers in Dravidian Etymology Dictionary [1]. Here we use M77 to denote Mahadevan's sign numbers [2], but the glyphs in this paper were created using Asko Parbola's NFM Indus Script font. Mahadevan has simplified and reduced the number of signs, by considering many of them as variants of the same theme or treating them as identical. For a richer source of symbols and data, please refer to Wells [3] or the character list in NFM Indus Script font.

Introduction

35 Indus valley civilization was contemporary to other civilizations such as the Mesopotamia and Egyptian civilizations with it's own independent system of writing. Each of these systems had their own culture and languages that were unique to their own civilization. It is a great challenge to

decipher any one of them without a multilingual Rosetta stone, but such decipherments have been successfully achieved in the case of Linear Elamite [5]. In the case of Indus script it has been well established, through various indirect attempts, that it is closely related in cultural aspects with the ancient Dravidian culture and language. However, broad confusion arises when attempts are made to relate it to an alphabetic system as it seems similar to a complex logo-syllabic system like the Egyptian system of writing. There have been many futile attempts to conjure-up such a relation between the Tamil Brahmi writing system and the Indus script, despite of the fact that the Indus signs have strong pictorial content.

It took a while for the modern alphabets to arrive (around 1000 BCE) and one can expect that the logo-syllabic system of Indus script, like the earlier versions of Egyptian writing system, to be pre-alphabetic/abugida stage, where pure consonants have not yet been crystalized and extracted out of the spoken languages. From this decipherment it seems that the atomic units (signs) of the IVC writing system are logo-syllables, with the high potential for creating homophones, thus reducing the number of signs required for the orchestration of the writing system within the specific context of IVC society and it's trade transactions.

In this decipherment, the author followed the trail left by these signs (like a detective), as it uncovers through internal evidences tracing them one by one. Sometimes serendipity plays a big role in our findings, and all this would not have been possible but for the enormous sign lists and concordance data that has been gathered painstakingly by many reserachers over very many decades, making them freely accessible online. Of course, it also helps if your mother tongue has roots to the very same language and culture, although displaced in time by more than 5000 years!

In the next section we first outline the syllabary of Indus script as it is preceived here. Detailed list of all symbols and their syllabic values are described in a later section on "Syllabic development". After the next section on orthography we briefly describe the skilled artistry of Indus writing system, then the crucial role of Numbers, Clitics and the system of "Learning through pun". In the section after "Syllabic development" we describe a few frequent phrases that emerge out of the corpus with two or three logos. We then classify a few logos under functional ideographic categories (although they are primarily syllables they also have certain ideographic tendencies). Next we outline the crucial aspects of fish signs and their various manifestations. In the section after this we briefly sketch the dominant trade activities and their relative importance and it's implications in the development of a class society. We then go on to decipher several lines of text in the corpus and also seals containing interesting graphical content with their corresponding text in a "Show and tell" section. We end the body of the article with sections about "Overlap with previous work" and "Acknowledgements".

Orthography of the Indus script

The logo-syllabic syllabary of Indus will be described here as it is preceived here in use. We try to discern if there are broad rules of orthography in this writing system that we can observe. We will start with some simple number systems and see how they can prefix or suffix to other symbols/syllables in the system.

To begin with we use a simple rule that there is one and only one syllable to which each of these signs get assigned to. This is a simple rule to follow and it can be easily be discerned if it breaks. We will now describe the other patterns or rules that we observe.

80 Let us now consider the M77 sign-373  to which we assign the syllable “pa” (from “paka^l”, meaning the sun or daylight). For the sign-86  we assume that it has the value “muta^l” (the primary one) and then see how it applies to the sign-375 . We believe that this value is indicated by the sign-376  that has a tooth attached to it. So we have:

$$pa + mut\text{-}al = pal$$

85

Now let us consider the sign-391 , a sign that we know has strong correlations with elephant seals from MVB [4] findings, so we assign the value “pa~~l~~la” that also has close proximity to “pal”, but we can see there are three cross-lines and/or six small pieces, making it more like “pillir”. There is also another possibility that this is decided by DED 1045 $\bar{o}\check{\tau}ai/\bar{o}\check{\tau}a$, a metal badge that is applied to the forehead of the elephant. So we observe that although broad rules are applied, there are also *ideosyncracies* of local culture that also provide a few interesting twists and turns, but in general it tries to confirm to some broad outlines.

We will now move to the interesting sign-287), which we have assigned the value “*valai/valai*” after looking at it’s close cousins sign-298)))) and sign-290) that has five strokes affixed to it’s top-right.

$$)))) =) = \text{vala} + |||| = \text{valai}$$

Doubling on that we get,

))))=valai + |||| = valai + ai = valaianjih or valaicci or valayacci

If sign-290 has three strokes on top we can get,

100 𑌕 = valai + 𑌕𑌕 = valai + mu = valaiyam

Semantically vala/vala is "right", "curved" as the symbol right parenthesis and when combined with "5" it becomes valai.

We also observed for M77 sign-62 (𐌶) that we can assign value “vālai” (scabbard fish that has sharp teeth). The sign-295 𐌶 “iru-valai” sounds similar to “ēri-vālai”. These signs also
105 indicate that such deformation of the base syllable is possible, i.e., “valai” ≈ “vālai” and “ēri” ≈ “iru”. Of course, high homophony is one of the crucial principles in creating a script with minimal number of signs.

Next, we look at sign-81 (𑌕) that we assign the value “**valai-puri**”, while we assign sign-63 (𑌕) the value “**kanni-pori**” (DED 1183, 4538). This then decides “**kanni**” for fish-sign and
110 “**puri**” \approx “**pori**” for bird (quail) sign.

Based on these successes we decide to take a look on the other variants of fish-sign. For sign-70 ☞ we apply “kāl” (DED 1483 assigns the semantic value of “cart”) and for sign-72 ☞ “kōl” (DED 2238 assigns a semantic value of “raft/float”). One might ask why not assign the values the other way around, but the important clue comes from the cross-line that looks more like paddle/oar. Yes, again there are some *ideosyncracies* that comes with it.

We now move to sign-328 \cup for which we assign the value “ū/u/va”. So for the sign-332:

$$\text{X} = \text{U} + \text{III} = \text{va} + \text{ai} = \text{vai}$$

Similarly we also get the very important sign-342:

$$\text{𐤓} = \text{𐤓} + \text{𐤌} = \text{ū} + \text{iru} = \text{ūr}$$

120 Next, we get on to double affix, sign-336 𐤓:

$$\text{𐤓} = \text{𐤓} + \text{𐤌} + \text{𐤓} = \text{u} + \text{mu-ta-l} + \text{𐤓} = \text{uṭaṇ} \text{ (DED 945)}$$

Here sign-374 𐤓 takes the value “𐤓” (from droplet, “nīr”) and sign-336 𐤓 (uṭaṇ) has the ideographic association with mortar & pestle (a marriage ritual association as well)! In the M77 concordance list the sign-321 𐤓 is immediately preceded by sign-336 𐤓. As the two sign-374 𐤓 are joined together by a string, a value of “ñāṇ” (DED 2908 “string”) will be the correct one:

125

$$\text{𐤓𐤓} = \text{uṭaṇ} + \text{ñāṇ} = \text{uṭaṇ-ñāṇ} \text{ (marriage agreement)}$$

Although the picture speaks thousand words there are also hints of syllables through micro-typography in Indus script. Consider sign-402:

$$\text{𐤓} = \text{𐤓} + \text{𐤌} = \text{na} + \text{ṭu} = \text{naṭu}$$

130 𐤓 = 𐤌 + 𐤓 = nāl + naṭu = nāṭu

$$\text{𐤓} = \text{𐤌} + \text{𐤓} = \text{mutal} + \text{ni} = \text{maṇi}$$

$$\text{𐤓} = \text{𐤓} + \text{𐤌} = \text{ni} + \text{mutal} = \text{aṇiyal}$$

and now let us consider another sign-51:

$$\text{𐤓} = \text{𐤌} + \text{𐤌} + \text{𐤓} = \text{mu} + \text{iru} + \text{an} = \text{māran}$$

135 with an additional twist as “māran” twists and looks back (a feature observed by Mahadevan and passed-on through personal communications by MVB).

Of course, we can also say as additional double-emphasis things like:

mu-kula-iru-vaṇi-māran

(triple generation true path Maran)

140 Now on to another topic:

M77 No.	Glyph	Roman	Tamil
169	𐤓	nilam	நிலம்
171	𐤓	nilai	நிலை
174	𐤓	iru-nēla	இருநெல்
88	𐤓	nal-iru	நல்-இரு

These are characters that seems to stand-out (pun intended with “nīl” being DED 3675 “to stand”), i.e., decided more by the context of IVC barter transactions and not by any complex orthography rules.

145 So as a broad outline we can say that the signs in IVC script are strongly associated with unique syllables and that the IVC writing system allows plenty of ways to mutate them in many ways from

their base ideographic glyph values. However, it is not clear that in the case when there are multiple affixes applied, then which comes first, i.e., whether a base glyph applies first etc. In general one could assume it flows from right-to-left and top-to-bottom, but I suppose there are many exceptions that are decided by the context.

For example the famous sign-116  can take the value “nellai/nallai” but the other-way around can also be “ayaḷ” is quite unlikely in the IVC transaction context. Sign-112  works as “munnāḷ” but in the semantics of IVC transactions “ñāḷam” works better. Of course, both are possible and even within the context of IVC “munnāḷ” might be a better choice in some particular case.

The non-affixed pure IVC signs have unique syllables associated with them, which have either single consonant and two consonants at the most. The combining rules usually seem to drop the middle consonants, and of course the vowels are modified as pertinent to the situation.

In some cases the components may not be a disjoint merger but a continuous merger (welding) of the two as in this case:

 =  + 
taṛi = tan-vaṛi

Finally as an interesting remark I would like to bring to attention a nice little sign-310  with a probable value of “vilaviḷa” (DED 5424) that sounds similar to “vavvāḷ” (long-tailed fruit bat?) as used in this line of text:

    

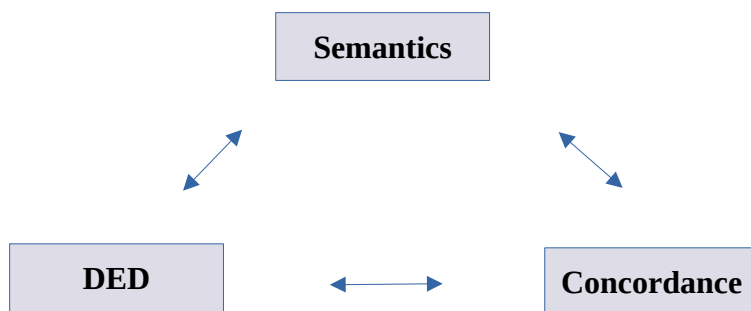

Trembling with fear “vilaviḷa” cognates well with “eerie bat”, so we try to decipher this line. Vilamban trembling with fear “loading” (māṭṭu, ) the bow, but what’s to the right of vilamban, a tiger? Tiger trembling or the hunter trembling? So we notice that it could be:

ciṛuttai = cīpu + iru-tai =  +  (right-to-left) = 

This describes the process of discovery through an example. As a broader generalization we could insist for Dravidian decipherment that the following triangle commute (i.e., more like walking on three legs or squash on three walls):

175

180

We illustrate this with a line of text:

valan.ai-iru.valai-varvan.ur-anjih

valan.ai-iru.valai-varvan.ur-anjih

185 To fit it into the context we need to modify this to:

valamai-iru.vilai-vuṛavan.ur-anjih

வளமை இருவிளை உழவனார் வஞ்சி

Semantics:

Fertile highly productive farmer's town paddy

190 or

Fertile double-crop farmer's town paddy

We now show how consonants and vowels express themselves in this system, but since it is not an alphabetic system, they don't carry any special importance by themselves as there are many more syllables with single and double consonants that are used to complete the language.

195 Consonants and their signs

Consonant	M77 sign	Glyph	Roman	Tamil
ka (க)	59	𑌕	kaṇṇi	கண்ணி
ce (சே)	76	𑌔	cēval	சேவல்
ta (த)	216	𑌖	tanṭi	தண்டி
pa (ப)	373	𑌘	pakal	பகல்
pu (பு)	78	𑌙	pūr	பூர்
pū (பூ)	54	𑌚	pū	பூ
ma (ம)	242	𑌛	māṭi, māṭu	மாடி, மாடு
mē (மே)	197	𑌜	mēl	மேல்
mu (மு)	86	𑌝	mu	மு, முதல்
mū (மூ)	89	𑌞	mū	மூ, மூணு
na (ன)	374	𑌟	na	ன
nā (நா)	95	𑌠	nāl	நால்
r (ர)	87	𑌡	ranṭu	ரண்டு
va (வ)	328	𑌢	va	வ
ṛa (ரூ)	400	𑌣	ṛa	ரூ
ṛu (ரூ)	110	𑌤	ṛu	ரூ

Although vowels and glides can be arbitrarily mutated, modified or introduced in to the system while combining with the base syllable, the vowels are very much required at the beginning of a word. We list a few here.

Vowel	M77 sign	Glyph	Roman	Tamil
an (அ)	1	𑀓	an	-அன்
āṭu (ஆ)	50	𑀡	āṭu	ஆத்து ஆடு
ila (இ)	323	𑀤	ila	இல
ūr (ஊ)	342	𑀥	ūr	ஊர்
eṟu (ஏ)	110	𑀦	eṟu	ஏழு

Skilled artistry of Indus script

At the core of Indus script lies the mastery of a skilled metallurgist (𑀡). We will illustrate this with these with few examples:

𑀥𑀡𑀦𑀥 = 𑀥𑀡𑀦𑀥 = vėl-aṇi-nuṛan-ūr = வேல்அணிநுழனூர்

The semantic meaning being the town with tailors, jewellery and hunting professions.

𑀡𑀦𑀥 = | 𑀡 𑀦 || || = mu-iru-mēl-pēr-ul = மூவிரு மேல்பொருள்

In this case the semantic meaning could be the mighty great guardian of the township (elevated to kings and gods at later times).

Some important townships

- 205 This is just indicative of the various kinds of townships and professions, and a deeper quantitative study is required to obtain their relative importance. What is interesting is that the last one in the list is farmer's town, which doesn't count really as a town, but in Dravidian languages, the term "ūr" seems to cover what we call "village" also. Here we use M77 to denote Mahadevan's sign numbers [2], but the glyphs in this paper were created using Asko Parbola's NFM Indus Script font. DED
- 210 refers to the entry numbers in Dravidian Etymology Dictionary [1]. For a richer source of symbols and data, please refer to Wells [3]. Some of these signs here have been identified earlier by other authors, so a proper acknowledgment of these facts will be added later on in a separate section.

M77 Sign	Glyph	Syllable	DED	Description	Tamil
342	𑀥	ūr	752	town	ஊர்
347	𑀥𑀥	velūr	-	hunter's town	வேலூர்
358	𑀥𑀥	chevūr	-	bronze worker town	செவ்வூர்
351	𑀥𑀡	vel-nuṛan-ūr	-	hunter-cloth worker town	வேல்நுழனூர்
?	𑀥𑀡	che-palla-ūr	-	bronze-elephant worker town	செவப்பல்லூர்
355	𑀥𑀡	vel-palla-ūr	-	hunter-elephant worker town	வேல்பல்லூர்

M77 Sign	Glyph	Syllable	DED	Description	Tamil
361	𑌕𑌕	che-ko-ūr	-	herder-bronze worker town	செங்கோவூர்
372	𑌕𑌕𑌕	vel-aṇi-nuṛan-ūr	-	hunter-jeweller-tailor town	வேல்அணிநுழனூர்
15	𑌕𑌕	uṛavūr	688	working, farming town	உழவூர்

Numbers

Numbers are treated separately, but they are just like other glyphs, easily welded and affixed to other glyphs, producing a plethora of possibilities. However, they are an important pointer to the fact that the actual standalone semantic value (in this case the numeric number) of the glyphs may have very little to do with it's semantic value.

M77 Sign	Glyph	Syllable	DED	Description	Tamil
86		mutal, -al	4950	one, primary	முதல், -ல்
87		-ar, -ir, iru-	474, 481	two, great, eminence	ரண்டு, -இர், -ர், இரு-
89		mū-, mūn-	5052	three	மூ-, மூன்-
95		nal-, -nāl, nalla-	2912	four, good	நல்-, -நால், நல்ல-
96		-ai	2826	five, unity	-ஐ
108		aru-, -ar	2485	six, river, fort	ஆறு, அறு
110		eṛu-, -eṛu	910	seven, rise, fertile	ஏழு, -எழு
Application of above phonemes					
112		nalām, nālam, munnāl	2913	land, healthy, before	நலம், நாலம், முன்னால்
116		nallai, nellai	-	rice	நல்லை, நெல்லை
121		nal.nel.āl	-	good rice person	நல்நெல்லான்
120		mu-munamum	-	three generations back	மும்முன்னோனும், மும்முன்னமும்
119		mu-munnor	-	two generations back	மும்முன்னோர்
107		mūri, mūrā	5041	bullock, buffalo	மூரி, மூரா

Clitics

Clitics provide sentence structure (the subject and the object). The default reading order is right to left, but before the clitic 𑌕 (sign 99), the reading is supposed to be left to right (but this doesn't seem to be followed strictly by writers of IVC script).

M77 No.	Glyph	Syllable	Tamil
97	ᳵ	-il, -da, -ta, -in	-ட, -டு, -த, -து, -இல், -இன்
99	ᳶ	-ra, -ru	-ர, -ரு, -ற, -று
123	᳷	-yar, -yin	-யர், -யார்
344	᳸	ūr-ār	ஊரார்
343	᳹	ūr-il	ஊரில்

The Indus writing is not without it's own inaccuracies, either by themselves or captured by mistake by the scribes. We noticed a few cases where the clitic sign-99 ᳶ has been captured as sign-87 ᳵ, which in those particular instances seem more like a case of sign-99 rather than sign-87. However, it must be mentioned that there are very few mistakes in the Mahadevan's corpus (both in intent and purpose), which has done a nice balancing act between variety and simplicity, thus making it easier for decipherment. For a slightly different opinion from Mahadevan on the list of signs is Wells [3]. We follow Mahadevan's sign list and numbers here, but it must be possible to do it using Wells [3] list of signs and sign-number as well without any loss of generality.

Learn through pun

Following are an indication of the pun that abounds in Indus script, which is termed as the “rebus principle”. Of course, it only makes sense if your language is close to ancient Dravidian. For deeper understanding you may have to refer to some of the sign values below this in the section on “Syllabic development”. We only sketch a few, but the Indus script syllabary abounds in such pun. The reduction of number of glyphs required for a writing system for Dravidian language is very much dependent on prudently choosing glyphs that provide highest possible homophony.

M77 Sign	Glyph	Syllable	DED	Description	Tamil
298	ᳵᳵᳵᳵ	valai = vala+ai	5267, 5288) = vala+5	வல+ஐ=வலை
	Right-parenthesis is “vala” (curved as well as right) in Tamil and “vala” + “ai” = “valai”. “vala” is curve, as well as “right”, which fits well with description of right parenthesis. Also, ᳵᳵᳵᳵ can be further expanded as “valaicci” or “valayacci” or “valayanjih”.				
62	ᳶᳵ	valai-kanni	5379	scabbard fish with fang-like teeth	வாளை கன்னி (மீன்)
	The fish “vālai” is known as the scabbard fish that has sharp teeth. A nice tooth is drawn at the top to elucidate the learning. This explains that the right-parenthesis sign-287 carry the phonetic value “valai”				
295	ᳶᳶ	eri-valai	902	Another sharp tooth fish	ஏரி வாளை (மீன்)
	A fresh water shark, Wallago attu , also known “eri-valai”, a pun again on the word with rebus equation: “vālai” ≈ “valai”. The prefix “eri” comes from “two” or “iru”, leading to one more rebus equation: “iru” ≈ “eri”.				
63	ᳶᳶᳶ	kanni-pori-valai	-	Trapping of birds	கன்னி-பொறி-வலை

M77 Sign	Glyph	Syllable	DED	Description	Tamil
	This learning tablet defines the phonetic value of fish as “kanni” and the bird as “puri” by defining it through a polysyllabic pun as “kanni-pori” with a parenthetic “valai” . The “kanni-pori” in Tamil is “trapping”.				
64	𑌕	valai-kanni	-	The clitic reverses reading order	கன்னி-பொறி-வலை
	The clitic sign 64 reverses the reading order to the right of it. This learning script defines that.				
376	𑌕	pal	-	teeth	பல்லு
	A teeth is indicated by the protruding teeth effect, just like in the fish teeth.				
57	𑌕	irumpu	486	iron	இரும்பு
	Now we have triple pun: iru-pu (two insects) ≈ erumpu (ant) ≈ irumpu (iron)				
181	𑌕	kottu	2065, 2064	pour (sting)	கொட்டு
	We can see pincler claws are indicated to show “sting” and “pour” are homophones in Dravidian “kottu”. The stinging honey-bee also is supposed elucidate connotations of “honey” that pours (kottu) from the beehive.				
393	𑌕	palla-ar	3986a, 1045, 4016	palla, pallar	பல்லர் (பள்ளம்)
	The sign 391 “palla” (see sign list below) is indicated here by putting it upside down in a hole (pallam) by creating the pun.				
310	𑌕	vila-vila	5424	tremble with fear	விலவில
	This cognates with “vavvāl” (DED 5370), probably a long-tailed fruit bat, with an eerie shivering scene that it creates.				
303	𑌕	iṭa,	432	cleft, gap, split, crack open , slit, breach, chasm	இட
	Also works as “iṭaveli” ≈ “iṭai-valai”.				

Signs and affixes

240 Just to give a flavor of the decipherment here we group few signs under base/affix geometry. In some cases there could be more than one affix. For more details see next section “Syllabic development”.

Affix Base						Ψ	○	◊	○	⋈	-
○	①	②	③	④	⑤	⑥	⑦	⑧	⑨	⑩	⑪
pa	pal	para	pammu	nal- para	pallā	vel-appa	pān	cirapp u	pānal	pān-an	nal-pallar
பா	பல்	பற	பம்மு	நல்பற	பல்லா	வெல-ப்பா	பாண்	சிறப்பு	பானல்	பானன்	நல்பல்லர்

Sign U

Affix Base					○	○	Ψ	-	⋈ ⋈ Ψ
U	U	U	U	U	U	U	U	U	U
ū	vaḷ	ūr	ūm	vai	uṭaṇ	uṭai	velūr	chevūr	vel-aṇi-nuṭaṇ-ūr
உள	வள்	ஊர்	உம்	வை	உடன்	உடை	வேலூர்	செவ்வூர்	வேலணிநுழனூர்

Sign ✕

Affix Base		○			⋈		⋈	-	⋈
✕	✕	✕	✕	✕	✕	✕	✕	✕	✕

Fish signs and it's varied manifestations

270 If we look at the frequency of the consonants in Tamil (both modern and old), the one that comes on top is “ka” and not “ma” or “mi”. We know that the fish sign is the most frequent in Indus script, so the obvious Turing’s not so enigmatic result is that the fish sign must start with “ka” and we found “kanni” is probably more feasible. However, our result “kanni” is independent of it and was inspired by M.V.Bhaskar’s interpretation (personal communication) that the “Garial” (the river

crocodile) is synonymous with fish and was probably trained and used as a boat. My own personal exposure to local customs also revealed that “kanni” is a term used commonly in earlier times for boat or any vehicle. The analogy could be that “kanni” referring to a women carrying children or it could be that the boat itself was driven by women in those days. However, this analogy is not without it’s difficulty. The word “kaṇṇi” referred in modern Tamil to be a maiden is without any support in DED [1]. The only support comes the word “kaṇi” according to DED 1408 is “tender”, “love”, “devotion” etc., and so is “kātal” DED 1445 - “love”, “affection”, “lust” etc. From not so mystical angle it could be just derived from “kaṇ” DED 1159 “eye”, “peacock’s tail”, probably leading to a mystical euphemism. Support from another quarter is “traveling places” come from DED 1443 “kāṇ” – “to see”, DED 1161 “kaṇ” – “place”, DED 1166 “kaṇai” - “arrow”, and DED 1109 “kaṭa” - “to move”. The interpretation that it is “kaṇṇi” is reinforced by other evidences like sign-63 “kaṇṇi-pori”, where it is meant as a “snare” DED 1183+4538.

Assuming that sign-59 is “kaṇṇi”, it could mean any of these things: vehicle, boat, cart, trap, trapper, soft, tender etc. We will show lines of text that seem to provide such evidences, but before that we decide a few variants of fish sign and phrases:

Standalone fish signs

124	𑌕	ēr	2815	plough	கலப்பை
341	𑌕	uru	689	harrow	உழு (பரப்பு, பரம்பு)
176	𑌕	vanji	5265, 56, 55	paddy, rice	வஞ்சி

M77 Sign	Glyph	Syllable	DED	Description	Tamil
412	𑌕	nāṅkuṛu	2906	earthworm	நாண்குழு

Franklin Southworth [6] work on connection between rice cultivation and Dravidian language shows how vanjī is related to rice:

310 “vari-(n)ci (with variants *vari, *varici, *varinci) ‘rice, paddy’ DED 5265 can be reconstructed for Proto-Peninsular Dravidian ... It is the source of the word for ‘paddy’—i.e., rice in the field or after
315 harvesting and threshing, either husked or unhusked, but not yet cooked—in most of the modern Peninsular Dravidian languages. This word may be connected to the Elamite bar ‘seed’—though there is some doubt, as the phonetic correspondences are not regular. A related form, *ari-ci/ki, with variants ari, arici, akki, arki (the last two ← *ariki) DED 215”

The Indus barter exchange system

310 We only illustrate the key points here. The local barter happens in the undocumented unorganized sector at the cross-roads (𑌔), in what is termed as “cantai” (சந்தை) in modern Tamil. The exchange is abstracted by the symbol 𑌔 and the barter mediated by 𑌕 (maran?), who is usually qualified by great reliable ancestary (flowery self-praise by the system). The exchange is done by symbol 𑌕 (kol, the dagger of exchange) and 𑌔 (an abstraction of the cross-road, 𑌔). Most of the script pertains to
315 official barter transactions of Indus, which are really instructions of transportation mode and the origin/destination. The clitics like 𑌔 (M77-99) orchestrate the sentence structure of the lines of the seals. An highly compressed form of information exchange mechanism is enabled by the drastic use of poly-semantic logo-syllabic script with each of these logo-syllables having many semantic possibilities with high degree of pun. This is so deeply wedded to Indus culture and mode of
320 exchange that the deciphering of it has taken so long. The skills of bronze-age artisans is in full display here with those hundreds of poly-semantic logo-syllables crafted and designed with care to work in those small spaces available in the seals. What is interesting that the deeply mysterious swastic symbol (M77-148) is now understood as the mundane:

𑌔 = 𑌔 + 𑌕 = cērukoḷ = சேர்ந்துகொள்

325 i.e., declaration of an important exchange, which is usually followed by drum beats '𑌔'. The drum beats are also a way to invite more people to the square for exchange (at cross-roads).

Relative volume of trade

330 We consider the absolute occurrence numbers in the text and also the association to the right of sign no. 99 𑌔. If we assume that what precedes (to the right of) sign. 99 𑌔 is the sender of goods then we get the following data:

Glyph	Description	No. occurrences	Forward transactions
𑌕	Cattle	369	290
𑌕	Ivory	182	82
𑌕	Hunting and trapping	130	61

Glyph	Description	No. occurrences	Forward transactions
𐏃	Agriculture	225	18
𐏄	Honey	44	18
𐏅	Elephant herding?	15	10
𐏆	Cross-road	41	8
𐏇	Tailoring	14	4
𐏈	Jewellery	12	3

Among 634 occurrences in IVC text with sign no. 99, assuming that what comes to it's right is the region that is sending commodities to the other regions, we can summarize that cattle and agriculture were the dominant activities, closely followed by carpentry and elephant-based products. Hunting, honey-gathering, fishing, carpentry, weaving and stitching were the other important activities that created products participating in the organized barter system of IVC. Hunting, honey-gathering, fishing, carpentry, metallurgy, weaving and stitching were the other important activities that created products participating in the organized barter system of IVC.

Class structure of IVC

It seems from the table above that the cattle herders had the dominant trade surplus and probably the agriculturists had the highest trade deficit. Sign-41 𐏃 (kīrān) (DED 1621) கீழான் refers to a poor person and studying his concordance we see that he is strongly associated with sign-137 𐏃 cēri (DED 207) சேரி, a place where many people assemble, associated in modern terms with the hut dwellments or slums in cities. It is quite surprising that this association has remained true for 5000 years! It is also noted that sign-41 𐏃 (kīrān) has atleast one association with all professions, except cattle herding (sign-267 𐏅). So it is clear that there is a class structure associated with IVC which puts cattle-herders (𐏅) at the top.

Praise heaped on the farmer

The barter system's accumulation of wealth by the ruling elite (sign-30 𐏃 "kovan"), accumulated in store-houses (sign-267 𐏅 "koṭṭa") necessitates a rhetoric of praise on the toiling farmer (sign-12 𐏃 "vuṛavan") like:

M77 signs	Glyphs	Syllable	Tamil	Description
12-75	𐏃 𐏈	peru.mu.kanni-vuṛavan	பெரும்பூக்கன்னி உழவன்	Enormously mature and soft farmer
12-2-86	𐏃 𐏈 𐏈	mutal-kāvalan-vuṛavan	முதன்மை காவலன் உழவன்	First guardian farmer
12-325-86	𐏃 𐏈	mutal-ilai-vuṛavan	முன்னிலை உழவன்	The foremost farmer

Such eulogy of farmer and farming has continued even 2000 years after IVC culture in Thirukkural:

Kural 1031: Howe'er they roam, the world must follow still the plougher's team;

355 **Kural 1032:** The ploughers are the linch-pin of the world; they bear.

Frequency of adjectives of towns

Adjectives of towns	Syllable	Frequency	ஃ* Frequency	ஂ* Frequency	Description	Tamil

𑌶	iru-nilai	38	very firm, stable	இருநிலை

360

Postpositions and their frequencies

This is the equivalent of prepositions in English, but in Tamil they are post-positions and not pre-positions.

M77 sign	Glyph	Frequency	Syllable	Description	Tamil
336	U	229	utan	with, together, agreement	உடன்
99/100	𑌵	663	-ar	it's	-ஆர்
123	𑌵	189	-ar	it's	-ஆர்
97/98	𑌵	174	-il	-in	-இன்

365

Broad observations

One of the surprising observation in this decipherment is that almost no individual identities like personal names are found in the text. All trade transactions are from one collective identity like country, village/town to another country, village/town. Individuals are extolled within the collective identity of farmers, workers, etc. There are however, strong leadership role identities like chief “mutalvan”, “peru(m)-kanni”, “mu-velan”, “iru-velan” etc. It seems that there are store houses where the items are sent and dispersed through some social mechanism of distribution. It seems that the distribution process could be related to sign-37 𑌵 “vilampu” (DED 5434) and sign-28, 𑌵 “vilampan” seems more like the supervisor of distribution of goods. Sign-17 𑌵 (villavan, villōṇ) seems like another protection officer cader maintaining law and order. Probably the sign-176 𑌵 “anjih” is a place each of the specialized workers like tailors, jewellery makers, carpenters, bronze workers, ivory workers, with each having a separate specialization location in town where others can reach them as targets for exchange. This tradition continues in many town in India even now, although in rapid decline with the arrival of multispeciality supermarkets.

370

380

Semantic reading

The whole exercise of decipherment will be meaningless gibberish if it doesn't lead to any to proper semantic outcomes. We have already seen a range of professions, towns and trade symbols that we are able to derive from the exercise. We will now read a few lines using the above syllabary that we have declared.

1. M77 Line 1006-100101

NFM font equivalent rendering:

Elephant country velappan: sends by bullock cart

450 பல்லார் வேலப்பன்: மாட்டு வண்டியில் அனுப்பு(கிறார்)

The break-up steps:

𑀱𑀲𑀳: palla-ar-velappa (பல்லார் வேலப்பன்)

]·: konde-kanni (கொண்டே கன்னி)

𑀩: anuppu (அனுப்பு)

455 **7. M77 Line 1095-100101**

NFM font equivalent rendering:

Cross-roads countryman sends cart to velappa town

460 நால்வழியார் வண்டி வேலப்ப ஊர்(க்கு)

The break-up steps:

]·: nal-vari (நால்வழியில்)

𑀩: kāl (கால்)

𑀩𑀲: velappa-ur (வேலப்ப ஊர்)

465 **Pluripotency**

The fish sign-59 𑀩 kanni takes the values of boat, craft, vehicle, bullock cart in these cases. We have also observed that in some other case:

that the sign-59 𑀩 kanni takes the value of “trapper” or “trapping”.

From these readings we also obtained:

ampu ≈ anuppu ≈ ambi

kondā ≈ konda

475 The syllables not only took different semantic values from the standalone values but they also took a deformed phonemic values, a key aspect of Indus writing system that enables pluripotency in both form and content in order increase coverage with only a few signs, thus increasing literacy.

Further readings

480 The above section considered just seven sentences in IVC text, but there are several thousand lines of text in M77 [2] and we will be pursuing deciphering them over time. Few pages have already been deciphered from the lines of text available in Mahadevan's work [2]. The results will be reported in online version tracking system, as and when we decipher them [7].

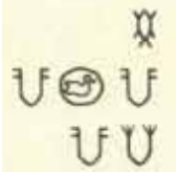

Graphics and text: a show and tell

485 In this document we decipher the text embedded along with illustrated scene in some of the IVC tablets. We have selected only the ones that have certain dramatic element in it.

M77	Graphics	Glyphs	Syllables	Description	Tamil
Plate V - 98		𑀮𑀺𑀭𑀸𑀓𑀺𑀭𑀸	tallu-utai	push-kick	தள்ளு உதை
Plate V - 103		𑀮𑀺𑀭𑀸𑀓𑀺𑀭𑀸	ceru-kottu-tadu-iru	stop-fight	செருக்கொட்டு தடு-இரு
Plate V - 105		𑀮𑀺𑀭𑀸𑀓𑀺𑀭𑀸	iru-vilaguar-kanni-anuppu	prevent fighting by sending guard	இரு-விலக்கார்- கன்னி-அனுப்பு

M77	Graphics	Glyphs	Syllables	Description	Tamil
Plate VI - 114		𑌕𑌃𑌕𑌃𑌕𑌃	mu-tāri-tai- kol-ūr-an	accept ancestral power transfer	முதாழிதை கொள் ஊரான்
Plate IV - 80		𑌕𑌃𑌕𑌃𑌕𑌃	nal.vari-yar- velan-kal- aru-ūr	Controller of cross-way Velan sending boat along the river in the town	நால்வழியார் வேலன் கல் ஆற்றுநர்

M77	Graphics	Glyphs	Syllables	Description	Tamil
Plate I - 18		புலையு	koṭa-ar-konda-para-iru-ūr	Elephant country (food): Cattle herder sending by bullock to messenger's town	கோட்டார்: கொண்ட பறையர் ஊர்
Line 1093		புலையு புலையு புலையு	konda ūr-tarupu-ūr velūr-ūr	Gathering of buffalo townsmen at Velūr town	கொண்ட ஊர் தறுப்பூர் வேலூர் ஊர்

Major countries depicted by animals in seals

This is another major category that is directly indicated by animals.

Plate III -55 [2]

490

495

Here we can see five major countries indicated branching from two unicorn motifs and here with two of them further branching into two subcategories.

The seal on the right is either calling for (or celebrating) bartering between five countries:

பு || ஐ (para-ar-ūr, பறையூர்)

calling for five nations to join in the barter system

சுசுசுசுசு

500

(cerukol, சேர்ந்துகொள்)

The animals that seem to indicate the five nations [4] in the seals are:

Markhor/Gaur (bison) ◇, Buffalo □, Elephant ⊕, Rhino ? and Tiger ✕.

Although all the skills and specialised skill centers (vanjih, 𑀓𑀲) are all distributed all over the towns and villages of all countries, in triple mountain tiger country (Afghanistan?) there seems to be
505 preponderance of hunters, animal trappers and honey collectors.

A brief summary of the of the IVC writing system

The IVC system can be considered as a resolution of the contradiction arising between pure ideographic and pure syllabic system of writing. We were able to associate unique syllabic value to every sign. Although the ideographic system allows easy understanding of the base signs through a
510 Dravidian root-word association, they also create a complex plethora of signs for the IVC writer to recognize and use. In order to reduce the number of signs needed, a pure syllable-based number system seems to have been used, which is affixed/prefixed/welded to the base sign to produce agglutination of word-pieces. The core consonant backbone of the base is maintained in the agglutination process, but the affixes may retain only the front/middle/tail syllable, depending on
515 whether it is affixed/infixes/prefixed, respectively. Although each sign signifies a syllable and not a concept or idea, an ideographic undercurrent remains strong throughout the IVC writing system, creating certain stability of the semantics of the writing system. It is also observed that certain amount of arbitrariness is allowed during the agglutination process: deletion, modification or addition of vowels/glides. Glides are soft consonants that are added as binders for smooth phonetic
520 transition between hard consonants. For proper understanding of practical Tamil grammar as it is spoken now one can consult Harold F. Schiffman [8], but one must not apply these grammar rules blindly to the IVC writing system, as 5000 years separate the present Dravidian languages and the IVC languages.

Overlap with previous work

No work germinates on it's own; it usually germinates on a fertile ground laid down by others. There were many conjectures on this Indus writing system by Asko Parbola, Iravadham Mahadevan and Brian Wells. I will briefly outline some of them pointing out overlaps and differences. It all started with the interpretation for fish sign as "mīn" by father Heras in 1930s [9]. This was reiterated with caution by Iravadham Mahadevan [10]. If we look at the frequency of the consonants
530 in Tamil (both modern and old), the one that comes on top is "ka" and not "ma" or "mi". We know that the fish sign is the most frequent in Indus script, so the obvious Turing's not so enigmatic result is that the fish sign must start with "ka" and we found "kanni" is probably more feasible. However, our result is independent of it and was inspired by M.V.Bhaskar's interpretation (personal communication) that the "Garial" (the river crocodile) is synonymous with fish and was probably
535 trained and used as a boat. My own personal exposure to local customs also revealed that "kanni" is a term used commonly in earlier times for boat or any vehicle. This was probably dropped later on in Tamil literature. The same however continues in Indo-European tradition that associates feminine gender to even a modern vehicle like train inflecting verb appropriately.

There were many interpretations by Asko Parbola and Mahadevan [11] on the M77 sign-342 𑀓𑀲, including "-an". MVB was quite critical of this being male-centric, an apt criticism, as he found no preponderance of male domination in IVC art. The interpretation of sign-1 𑀓𑀲 as "-an" has also been proposed by Bryan Wells [3] and then MVB's criticism can be cleverly overcome by stating that "-an/-al" could have been sex-neutral term in those days and associating "-al" with feminine gender could have been a later invention by the male-dominant society (especially as "-al" has connotation
540

545 with darkness and evil). On other proposals of Iravadham Mahadevan and Bryan Wells's on
numbers as being semantically numbers, we found no parallels in our interpretations. In fact, the
numbers are probably the only signs that almost never reflected their standalone ideographic value.
This was indeed quite suprising for us, as we found almost no evidence for this. MVB has been
quite radical in this interpretation, proposing that almost a new syllabic system can be conjured-up
550 using just the numbers alone.

Yuri Knorozov [12] has also done extensive study of the IVC writing system and he has correctly
identified numbers as syllables, with sign-86 | identified as "or", || as "iru", ||| as "mu", |||| as "nal", |||||
as "ai". This is exactly as what we have deciphered here, although we consider sign-86 | as "mutal"
and not "or".

555 Bryan Wells's work also proposes other possibilities like sign-358 𑀓 being closely related to the
Hare's ears and so proposing the syllable "ce" from "cevia". The author is in full agreement with
this proposal and in fact, both this and sign-76 𑀓 also evokes the same "ce" syllables. In the IVC
context of bronze-age, these have semantic connotations to "cembu" (bronze). Bryan Wells also
proposed "kō" for sign-261 𑀓 and "kōṭa" for sign-267 𑀓. We are fully in agreement with these
560 readings.

Ansumali Mukhopadhyay [13] studied the word for teeth, "pa l la" and it's relationship to the
ivory trade. The sign-391 𑀓 is here deciphered as "pa l la", the elephant, an important sign in the
IVC, especially in relationship to the ivory trade. There could have been many more proposals that
may have some overlap with our interpretations here. We would be glad to include them in our
565 document as soon as we are made aware of them.

Farmer et al. [14] criticism that the average number of signs in a line are two short (on the average
of between 4 and 5 signs) for any meaningful orchestration of a writing system is quite correct.
However, our decipherment points out that these lines of text are mostly **from/to** addresses with
mode of transport indicated through fish and arrow signs in-between the **from** and **to** addresses.
570 Sometimes the mode of transport is left out (or is implied) and the same could be true of the **to**
address, which probably is implied from the context. There are also very short lines heaping praise
on towns and their workers. In any case, writing in crisp and short messages is a tradition that has
continued for a long-time in Dravidian tradition, as established in Thirukkural, which is taught even
now in schools of Tamilnadu.

575 Conclusions

First important study of the Dravidian family of languages was by Caldwell [15] in 1886. Recent
studies indicate that the temporal origin of proto-Dravidian to be around 2500 BCE [16, 17], so it
can be discerned that the Indus script could have been a major epicenter for the formation of the
identity of Dravidian language family. We can even go ahead and conjecture that some aspects of
580 Dravidian linguistic structure could have been a result of remoulding of languages of the Indus
Valley Civilization into an agglutinative reformulation as contrained and evolved by the Indus script.
After the gradual decay of IVC, with southern migration of the population, the language could have
radiated into the many branches of Dravidian family [16]. A detailed study of the decipherment and
it's relationship to Dravidian morphology could provide further clarity on this feasibility.

585 Acknowledgements

The decipherment became possible with the arrival of the splendid work by MVB [4]. This laid down the map that lead to all the linkage between graphics and the text, building this beautiful journey of discovery enabled by M.V. Bhaskar, with whom I have been working for the past several years. My learning in art, Brahmi and Indus Script derived from his interactions. Of course, all this work could not have been possible without the enormous efforts of Asko Parbola, Irvadham Mahadevan, Bryan Wells and many others. Thanks are also due to Eugenia Vanina for enlightening me about works by Russian scholars on Dravidian languages and the Indus script, especially the collected works of Yuri Knorozov [12].
